Logging and Monitoring Policy

Policy Statement

- IBVL recognizes the critical importance of logging and monitoring critical user activities, network traffic, security events, and IT infrastructure capacity to detect and respond to security incidents effectively.
- This policy establishes guidelines and procedures for defining, documenting, and approving logging and monitoring activities by management.

2. Policy Ownership and Approval

- The policy for logging and monitoring of critical user activities, network traffic, security events, and IT infrastructure capacity shall be defined, documented, and approved by the management of IBVL.
- The Information Security Team shall oversee the implementation and ensure compliance with this policy.

3. Log Management

Logs shall be maintained to capture the following activities, at a minimum:

a) All use (both authorized and unauthorized) of BFL's accounts or credentials provided to service providers for use on behalf of BFL (e.g., BFL email IDs).

b) Suspicious activities such as failed logins, start and stop of services, modification of user privileges, and denial of service attempts.

c) All activities performed by administrative or privileged accounts.

d) Inbound and outbound network traffic via the firewall.

4. Log Review

- Logs, including network traffic, critical user activities, etc., shall be reviewed periodically, at least annually, to detect anomalies, security incidents, and performance issues.
- The Information Security Team shall conduct these reviews and promptly investigate any identified issues.

5. Monitoring of IT Infrastructure Capacity

- The capacity of IT infrastructure components—including storage requirements, bandwidth usage, and processor utilization—shall be monitored regularly to ensure availability and optimal performance of IT assets.
- Any capacity constraints or performance degradation shall be addressed promptly to maintain service continuity.

6. Availability of Log Collection and Storage Infrastructure

- IBVL shall ensure that necessary processes and IT infrastructure are available for the collection, storage, and analysis of logs, including critical user activities, network traffic, and security events.
- This includes deploying appropriate logging tools, storage systems, and analytical capabilities.

7. Log Retention Policy

- A log retention policy shall be defined, specifying the duration for which logs must be retained based on regulatory requirements, industry standards, and operational needs.
- Logs shall be retained securely and consistently, and their disposal shall be conducted in accordance with the retention policy.

8. Access Controls for Logs

- Access to edit or delete logs shall be restricted to a limited number of users with legitimate need (e.g., system administrators).
- These users shall not be involved in log review activities to maintain the integrity and independence of monitoring processes.

9. Compliance and Auditing

- Compliance with this policy shall be monitored through regular audits and assessments conducted by the Information Security Team or designated auditors.
- Any non-compliance or deficiencies identified shall be addressed promptly to ensure the effectiveness and reliability of logging and monitoring practices.

10. Training and Awareness

- Employees involved in logging and monitoring activities shall receive training and awareness sessions to ensure they understand:
    - Their roles and responsibilities
    - Logging and monitoring procedures
    - The importance of maintaining accurate and secure logs for security and compliance purposes

11. Continuous Improvement

- IBVL shall regularly review and update logging and monitoring processes, tools, and procedures to:
    - Incorporate industry best practices
    - Address emerging threats
    - Enhance the effectiveness and efficiency of logging and monitoring

12. Incident Response Integration

- Logging and monitoring processes shall be integrated with the incident response plan to enable timely detection, investigation, and response to security incidents and breaches.

- Logs shall be used as critical sources of evidence during incident response and forensic investigations.
