Server Review Policy

1. Objective
To establish a consistent and comprehensive process for the periodic review of all servers (physical and virtual) to ensure optimal performance, security, compliance, and resource utilization.

2. Scope
This policy applies to all servers managed by the IT infrastructure team, including production, development, test, and backup environments.

3. Review Frequency

- **Every 15 Days:** All servers will undergo a basic health check to identify any early warnings or performance/security concerns.
- **Monthly:** Performance monitoring, backup verification, and patch status checks.
- **Quarterly:** Security audit, access review, and capacity planning.
- **Annually:** Full configuration and compliance audit.

4. Review Parameters
Each review must assess the following areas:

- Performance Metrics (CPU, memory, disk I/O, network usage)
- Security Logs & Events (intrusion attempts, unusual logins)
- Patch and Update Status (OS and software updates)
- User Access Controls (active users, admin rights, expired accounts)
- Backup Status (success/failure logs, restoration tests)
- Service/Process Health (critical services, resource hogs)
- Hardware Utilization (for physical servers)
- Antivirus/Endpoint Security status
- Compliance Checks (as per ISO/ITIL/organization-specific standards)

5. Roles & Responsibilities

- IT Infrastructure Team: Perform reviews, document findings, and implement recommendations.
- Server Owners (Application/Project Teams): Coordinate with IT to validate server-specific requirements.
- IT Manager: Review reports, escalate issues, and ensure policy adherence.

6. Documentation

- Maintain a Server Review Checklist and Review Report for each server.
- Store all reports in a centralized, access-controlled location.
- Log identified issues, action plans, and resolution status in the ITSM tool or internal tracking system.

7. Compliance & Audit

- All server reviews are subject to internal and external audits.
- Non-compliance must be documented with a risk acceptance form or corrective action plan.

8. Exceptions

Any deviation from this policy must be approved by the IT Manager and documented accordingly.

9. Review & Update

This policy must be reviewed annually and updated as necessary to reflect changes in infrastructure, compliance requirements, or best practices.

10. Server Inventory Sheet

A server inventory sheet will be maintained and updated periodically.

Below are the Server Inventory Sheet:
